SUMMARY

Senior Project Manager with 7+ years in IT delivery, since 2019. Took a fintech payments product for an enterprise client in Latin America from unclear post-sale scope to live production with 50,000+ users, leading a cross-functional team of 13 through to a full handover. Delivers across Agile, Scrum, Kanban, Waterfall and hybrid models, on fixed-price and T&M contracts. Author of PM Control Tower, an open-source framework for AI-assisted project management.

SKILLS

Delivery and methodology: End-to-end delivery, Agile, Scrum, Kanban, Waterfall, Hybrid, Full SDLC, Release management, Change management, Risk management, Quality management

Commercial: Fixed-price, T&M, Budget tracking, Requirements, Estimation, Scope management

Stakeholders and teams: Stakeholder management, Enterprise clients, Conflict resolution, Prioritization, Distributed remote teams, Staffing and backfills, Mentoring and onboarding

Domain: Fintech, Payments, Card infrastructure, Production support, Mobile releases (App Store, Google Play)

AI-assisted delivery: Claude skills and scheduled routines, Notion and Jira integrations, Reporting and meeting prep automation, Human-in-the-loop communication

Tools: Jira, Confluence, Linear, Trello, Notion, Slack, Figma, Claude (Cowork, MCP), App Store Connect, Google Play Console

WORK EXPERIENCE

Senior Project Manager, Volya Technologies (formerly Knubisoft)

2022 - present · Remote

- Took over a fintech payments product for an enterprise client in Latin America after discovery, reverse-engineered what had been sold against what the client actually needed, set the real scope and drove it from early build to live production on card infrastructure, now serving 50,000+ users.
- Owned the full delivery lifecycle (requirements, planning, release management, budget, risk, quality) across hybrid Agile and fixed-scope phases.
- Led the structured handover of the development team to the client as the engagement moved in-house, keeping the production system stable.
- Single client-facing point of contact for enterprise stakeholders across time zones, handling conflict resolution and decisions under tight deadlines.
- Led a cross-functional team of 13: turned client requirements into prioritized work and, when scope spiked, reset priorities and walked the client through the trade-offs.
- Covered analyst and product owner duties where the project had no dedicated role.
- Ran the payment authorization component as a separate ongoing workstream, including production support.
- Owned all App Store Connect and Google Play publishing for the product. Earlier, delivered a portfolio of mobile apps through to release on both stores.
- Designed and open-sourced PM Control Tower, built through daily use on this project.

Project Manager, IT Outsourcing Company (name under NDA)

2019 - 2022 · Remote

- Delivered fixed-price and long-term T&M projects for US-based clients, with budget tracking on fixed-price contracts.

- Gathered and clarified requirements, did business analysis, and produced work plans, schedules and estimates.
- Reported progress and risks to stakeholders across the full delivery cycle.
- Account manager and primary point of contact for a US-based enterprise client's engineering organization: resourcing, staffing and partnership topics.
- Ran regular partnership reviews with client leadership and tech leads: agreed priorities for the next delivery phase, tracked action items, coordinated scope paperwork between both sides.
- Coordinated cross-functional, distributed teams of up to 20 people.
- Managed staffing and backfills: interviewed QA automation candidates and kept a bench of previously used engineers for fast ramp-up.
- Coordinated contractor access and tooling with the client, escalating recurring access issues until they were resolved.

PROJECTS

PM Control Tower · Open source (MIT) · v1.9 beta · tower.bodco.pm · github.com/bodco/pm-control-tower
Claude plugin and Notion template for project managers: 21 project-agnostic Claude skills, a Notion hub of 11 linked databases and one config file per project. Collects context, preps meetings, drafts reports and tracks risks on daily, weekly and monthly schedules. A human approves every outgoing message. Live Tips, a companion Mac app, gives facts and ready sentences during calls and writes the meeting notes to Notion. Built and used daily on a live client project.
